

Bank Aggregation

Improve compliance, customer acquisition, fraud detection, credit assessment, payment instrument validation, identity verification and risk analysis.

Bank Aggregation uses data directly from a bank account, to get the balance, deposits, and detailed transaction information of your customers. We apply data science, machine learning, and analytics to identify the most important bank account's behaviors in easy to use results.

With Bank Aggregation you get truly alternative data to help you make informed decisions, by verifying identity, account ownership, employment, income amounts and frequency, debt stacking, expense trends, the ability to pay, life events, marketing opportunities, and much more.

Key Features

ACCURACY

Cleansed, normalized & categorized data is more accurate than competitors

COVERAGE

Highest coverage: 30,000 institutions with multiple connections

COMPLIANCE

FCRA compliant report protect consumer and service providers

EXPERIENCE

The user interface improves the overall experience and reduces friction

REPAYMENTS

Provides the optimal date for processing a payment

Key Benefits:

- ▶ **REDUCE FRICTION** – Improve your consumer application and documentation process.
- ▶ **ORIGINATION UPLIFT** – Real-time data provides insight into consumers that you might have declined.
- ▶ **REDUCE LOSSES** – Identify which consumers are a financial risk.
- ▶ **IMPROVE COMPLIANCE** – FCRA permissible and preferred service, based on factual real-time data, reduces scrutiny from regulators.
- ▶ **ENHANCED DATA** – Determine identity, income source, income amount, income frequency, loan stacking, expense trends, ability to repay, life events, and much more.

Validate income, expenses, and payment patterns

ValidiFi's Bank Aggregation service is built to convert and acquire more consumers by extending credit access with information from checking, savings, and accounts at other types of financial institutions. Bank Aggregation provides deep insights to a consumer's income, employment, expenses, and the overall ability to pay by creating a robust profile of a consumer's financial situation. Leverage Bank Aggregation for automated account monitoring alerting you when a consumer's financial condition has changed, so you can increase credit or pro-actively reach out preventing loss quickly. Additionally, you can use real-time balance information to determine the likelihood of success for a payment to clear.

Risk Score

Bank Aggregation removes the guesswork from decisioning and translates the raw data into an actionable score. The Risk Score is calculated from the most predictive attributes including ability to repay, length of history, current balance, available balance, and the number of negative balances.

The Risk Score has been scientifically validated to reveal consumers that are more likely to default on first payment and identify declines with the ability to repay.

Reducing Risk

- ▶ Bank Aggregation enables businesses to identify which consumers are a financial risk
- ▶ Identify customers that do not have a consistent income stream or lack evidence of employment
- ▶ Screens out applicants that cannot confirm the ownership of their bank account

Increasing Origination

- ▶ Real-time data gives you a clear picture of consumers that you might have declined otherwise
- ▶ Reach thin files and no-files, those who lack a credit presence

This suite is one of many solutions ValidiFi offers to help you make better decisions, providing you with the key information you need to accurately know your customers. Email info@validifi.com or visit us at www.validifi.com for more information.
